

Laravel Full-Stack Web Development Roadmap for Beginners

Phase 1: Foundation (1-2 Months)

HTML, CSS, and JavaScript Basics

- Learn HTML structure and semantics.
- Style pages with CSS (Flexbox, Grid, responsive design).
- Understand JavaScript fundamentals (variables, loops, functions, DOM manipulation).

Version Control with Git

- Learn basic Git commands (clone, commit, push, pull).
- Set up GitHub for project versioning.

Introduction to PHP

- Learn PHP syntax, variables, arrays, loops, and functions.
- Understand form handling and basic server-side logic.

Phase 2: Backend with Laravel Basics (2-3 Months)

Setup and Laravel Fundamentals

- Install PHP, Composer, and Laravel.
- Understand MVC architecture.
- Learn Laravel folder structure, routing, and Blade templating.

Database Basics and Eloquent ORM

- Learn MySQL basics (tables, queries, relationships).
- Use Laravel's Eloquent ORM for database interactions.
- Perform CRUD operations (Create, Read, Update, Delete).

Authentication and Authorization

- Implement user login/register with Laravel Authentication.
- Learn roles and permissions basics.

Phase 3: Frontend Integration (1-2 Months)

Laravel with Frontend Tools

- Use Laravel Blade for basic templating.
- Integrate Tailwind CSS or Bootstrap for styling.
- Learn Laravel Mix or Vite for asset compilation.

Basic JavaScript Framework (Optional)

- Pick Vue.js (Laravel-friendly) or React.
- Learn components, props, and state management.
- Connect frontend with Laravel APIs.

Phase 4: Building and Deploying Projects (1-2 Months)

Build a Small Project

- Create a simple app (e.g., blog, to-do list, or e-commerce site).
- Apply CRUD, authentication, and frontend styling.

Deployment and Best Practices

- Learn to deploy Laravel apps (e.g., on Heroku, Laravel Forge, or a VPS).
- Understand environment variables, debugging, and optimization.

Phase 5: Next Steps (Ongoing)

- Explore Laravel packages (e.g., Laravel Livewire, Inertia.js).
- Learn API development with Laravel (RESTful APIs).
- Study testing (PHPUnit, Laravel Dusk).
